

GOBHI J

Senior Automation QA Engineer

Mobile : +91-9952286150

E- MAIL : gobhi28396@gmail.com

PROFESSIONAL SUMMARY

Automation Architect with 9+ years of experience designing and building scalable UI, API, and data-driven automation platforms from scratch. Expert in Playwright (TypeScript) and Selenium (Java), with strong focus on CI/CD, cloud-based execution, and system-level testing.

Proven impact in reducing regression cycle time by up to 60% and improving test stability through robust framework design and flaky test mitigation strategies.

Experienced in architecting enterprise-grade automation solutions for multi-application ecosystems, including parallel execution pipelines, database-driven execution tracking, and real-time QA dashboards.

Actively leverage Generative AI and prompt engineering to generate test scenarios, optimize automation scripts, and accelerate debugging.

Seeking Senior SDET / Automation Architect roles in product-driven environments.

CORE SKILLS

- Automation: **Playwright (Advanced), Selenium, Rest Assured**
- Programming: **TypeScript, JavaScript, Java, Basic Python**
- Architecture: **Framework design, Hybrid/POM, Parallel execution, Retry strategy**
- Backend & APIs: **Node.js (Express basics), REST APIs, Microservices**
- Frontend: **React, Dashboard Development, QA Analytics, Report Visualization**
- CI/CD: **GitHub Actions, Jenkins, Dockerized Test Execution, Slack Notifications, Automated Email Reporting**
- Database: **PostgreSQL, Complex SQL, Data validation automation**
- DevOps & Cloud: **Basic AWS (EC2, S3), CI/CD on cloud**
- Advanced QA: **Execution Analytics, Quality Dashboards, Report Analysis, Flaky Test Detection, Risk-Based Testing, Leadership Metrics, Release Health Monitoring**

PROFESSIONAL EXPERIENCE

Senior Automation QA Engineer

2024 - now

Synechron, Bengaluru

- Architected Playwright framework supporting UI + API + DB validation for (AMEX - Credit card Onboarding system - Backend services and UI)
- Designed execution analytics system with PostgreSQL
- Integrated CI/CD pipelines with GitHub Actions and Slack alerts
- Built React dashboard for real-time QA insights
- Reduced flaky tests using retry and detection strategies
- Implemented AI-based test optimization concepts -Test case generation and edge case identification, Automation script optimization and Debugging test failures and improving efficiency
-

Senior Software Engineer I

TALENT500, Bengaluru

2022 - 2024

- Migrated WebdriverIO to Playwright reducing execution time
- Integrated Jenkins CI/CD pipelines
- Improved API automation coverage

Senior Software Engineer

QAPITOL QA, Bengaluru

2020 -2022

- Automated healthcare application (*HelloDoc*) using WebdriverIO (TypeScript), covering Consultant and Patient workflows
- Designed scalable automation for key flows: appointment scheduling, consultation lifecycle, and billing validation
- Built modular POM-based framework with reusable utilities for maintainability and extensibility
- Integrated automation suite with Jenkins CI for continuous regression and faster defect detection
- Achieved cross-browser coverage and improved stability using synchronization and robust error handling
- Collaborated with cross-functional teams to validate complex healthcare scenarios and enhance product quality

Software Engineer

CAPGEMINI India Ltd, Bengaluru

2017 -2019

- Developed Selenium automation using Java & TestNG for (*Banker Desktop* - Credit card Onboarding Web Application at ANZ banking)
- Built reusable automation utilities

KEY ACHIEVEMENTS

- Reduced regression execution time by 60% through Playwright migration, API-driven test setup, and optimized parallel execution.
- Designed a centralized QA analytics platform that improved visibility into automation health and execution trends.
- Built leadership dashboards enabling data-driven release decisions using historical quality metrics.
- Automated Slack and email notifications, reducing manual effort in communicating regression results.
- Improved regression stability by identifying and reducing flaky tests through execution trend analysis.

LEADERSHIP & OWNERSHIP

- Led a team of 3–5 QA automation engineers in designing, developing, and maintaining the Playwright automation framework.
- Mentored and onboarded new team members by conducting framework walkthroughs, coding sessions, and best-practice training, enabling faster productivity.
- Performed code reviews and enforced automation coding standards to improve maintainability and reduce defects.
- Collaborated with developers, Business Analysts, and Product Owners to define test strategies, prioritize automation efforts, and ensure release quality.
- Owned automation planning, task allocation, and sprint deliverables for the QA team.
- Drove framework improvements by identifying technical debt and implementing reusable utilities and common components.
- Defined automation standards, project structure, and reusable design patterns for Playwright-based automation.

EDUCATION

- **Bsc in Computer Science** from Subbalakshmi Lakshmipathy college of science affiliated to Madurai Kamaraj university, passed out in the year - 2016 with an aggregate of 76%.

CERTIFICATION

- **ISTQB** certified in Software Testing
-
